

Vehicle Tracking, Locating and
Fleet Management Systems

“For People on the Move”

TrakPro, LLC

TrakPro's Products Quick Reference Guide

“The most powerful, state-of-the art, high powered, vehicle and asset locating, tracking, and fleet management systems available on the market today!”

Turning Position Into Knowledge & Profit

TrakPro's Satellite Series

Unparalleled coverage, twice the accuracy of traditional GPS, and the most affordable rate in the industry.

GLS satellite coverage and positioning accuracy to monitor and communicate with your vehicles and assets. Locational and tracking information is always available for your fleet. *TrakPro's product line includes units for your trucks as well as for your trailers, containers, barges, boats, and other non-powered assets.*

An impressive array of sensors and controls, including 1708 port connectivity along with analog and digital options alert you to any changes. Monitor door openings, temperature, empty state, PTO operation, engine idle; control locks, starters, mag doors, and more. *TrakPro's Satellite Series of products also include units to monitor and alert on telemetry data from wells, pumps, and other assets which don't even move.*

Optional unlimited 2-way text messaging with custom forms fill-in and touch screen displays (or use your own laptops and PDAs) ensures you and your drivers are always up to date for an industry low communications cost per month.

TrakPro's exclusive combined interface allows you to monitor and manage both your tractor and trailer assets in one program, and on one screen. Fleet grouping allows even more filtering and control for mapping and reporting.

TrakPro's DX Series

TrakPro's broad DX lineup of “active” AVL vehicle and personnel management solutions allow you to fit the right solution to your needs, rather than having to live with the only thing offered elsewhere.

The DX Series of AVL products use everything from GLS satellite to a variety of cellular data systems for coverage and communications, guaranteeing you coverage wherever you need it.

Depending on the product set, an impressive array of sensors and controls, including 1708 port connectivity along with analog and digital options, alert you to any changes and provide the detail you need to better manage. Monitor door openings, temperature, PTO operation, engine idle; control locks, starters, mag doors, and more.

Optional unlimited 2-way text messaging with custom forms fill-in and touch screen displays (or use your own laptops and PDAs) ensures you and your drivers are always up to date for an industry low communications cost per month on some of these products. Some products also include TrakPro's exclusive combined interface, allowing you to monitor and manage your tractor, service, and trailer assets in one program, and on one screen. Fleet grouping allows even more filtering and control for mapping and reporting.

Extensive reporting shows engine idle, accurate stop detail, speeding, distance traveled, travel history, sensor state and history, fast acceleration, hard braking, and much more.

TrakPro's DX Series of AVL locating, tracking, and management units has the right solution for you, based upon your specific needs and budget.

TrakPro's AX Series

Coverage up to 99.9% of North America at low monthly rates, and a system which uses your own 2-way radio for local coverage!

TrakPro's AX Series of products include units which use your existing 2-way radio to send locational, alerting and vehicle history detail back to your facility with no added monthly fee what-so-ever, and units which use the Cellemetry cellular networks with over 99.9% continuous coverage for all of North America.

TrakPro's AX Series—continued...

Our radio lineup of AX3 products provide instant, real-time location, either automated or on demand, making it perfect for public safety, school buses, and cabs, among others. They include a panic button and up to two other sensors by default, as well as 3 controls.

Our AX8 Cellemetry products show you where your vehicle is throughout the day, and whenever you need to locate it on demand. These units have an impressive array of sensors and controls allowing you to report on and control almost anything in the vehicle (door and PTO activity, engine run times, stop engine, flash lights, sound horn, pump or generator operation, etc.). These are products you can really "reach out and touch", anywhere. These units operate essentially as "event driven" products, meaning that frivolous communications are avoided and your monthly communications fees are the lowest possible.

Combining the TrakPro Local Series AX2 "passive" product with the AX8 lineup creates an AX8+ unit which is unique to TrakPro. Lower cost locational and alerting information when you need it AND very detailed vehicle and personnel activity reporting to manage from after they return to one of your base locations. All of the benefits of both worlds (locating and full featured tracking and reporting) for lower monthly communications fees!

TrakPro's AX Series of vehicle locating, alerting, and management units provide what you need to know, when you need to know it, at the lowest available cost.

TrakPro's Local Series

No communications costs what-so-ever — extensive vehicle tracking and locating functionality.

TrakPro's Local Series products include units which use your existing 2-way radio to send locational and vehicle history detail back to your facility and units which automatically transfer their historical data to your PC when they return to your facility via no cost wireless radio waves.

Our radio lineup of products provide instant, real-time location, either automated or on demand, making it perfect for public safety, school buses, and cabs, among others. They include a panic button and up to two other sensors by default as well as three controls. The AX3 is the perfect match for the Public Safety, Taxi, School and other bus and public transportation, not to mention radio-based business.

Our wireless "passive" lineup of products collect travel history throughout the day or week and then transfer that data to your PC once they enter one of your base locations. We call them "passive" as they do not allow immediate location or panic alerting. They simply collect very detailed data about your vehicle activities as you go about your work. Once these systems download their information to your PC, you have everything you need to better manage your vehicles, routing, personnel, and business, without any monthly communications fees what-so-ever. Key business questions answered include: how long were we really stopped at each call, did we use the vehicles after hours, were we stopped where we should have been and not performing side jobs or in general not being productive, are we driving efficient routes or wasting gas, are we speeding or in other ways increasing risk. The return on investment on this product is typically less than 1 1/2 working days each month!

Extensive reporting on the passive units show engine idle, accurate stop detail, speeding, distance traveled, travel history, sensor state and history, fast acceleration, hard braking, and much more. Geofencing and customer defined landmarks also provide added detail to help with your business understanding and vehicle and staff operation.

TrakPro's Local Series of vehicle locating, tracking, and management units provide what you need to know, when you need to know it, at the lowest available cost.

TrakPro's Asset Management Series

Unparalleled geographic coverage, tracking and monitoring for construction and rental assets, trailers, rail cars, containers, barges, wells, pumps, and other mobile or stationary assets at very low monthly costs.

TrakPro, LLC

GLS satellite coverage and positioning accuracy uses low Earth orbiting satellites to monitor your assets throughout North America. Cellemetry cellular coverage products round out this series of products with over 99.9% North America coverage. Locational and sensor/status information is always available for your assets. *TrakPro's product line includes units for your generators and other construction and rental assets, trailers, containers, barges, boats, wells, pumps, and other powered and non-powered assets.*

An impressive array of sensors and controls alert you to any changes and provide the detail you need to better manage your actions and assets. Monitor oil change and other service requirements and status (get there before you lose a week of activity and incur more damage), engine hours, service lights, overheating, run time, door openings, temperature, empty state, PTO operation, and pressures; control locks, starters, mag doors, engine on/off and more.

Ruggedized gear is meant for the harshest environments and the unpowered battery life of one line of our asset models is up to seven years (minimum three years) without ever changing a battery or applying power! Our other products recharge as the generator or engine runs.

Geofencing on some models and asset movement from prior location alerting on all models aid in rapid theft recovery.

Extensive reporting shows sensor state and history, engine run time, proactive service alerting, run time while service engine or overheating alerts were present, and much more.
